

UseGalaxy.fr

a Galaxy server for the French
bioinformatics community

Anthony Bretaudeau (INRAE, Rennes)

Thomas Chaussepied (CNRS, Rennes)

Lain Pavot (INRAE, Clermont-Ferrand)

Julien Seiler (CNRS, Strasbourg)

Gildas Le Corguillé (Sorbonne Université, Roscoff)

Galaxy is an open source web-based interactive data analysis platform that supports defining and executing workflows.

Jobs are executed on HPC infra.

The image displays three panels from the Galaxy web interface. The left panel, titled 'Tools List', shows a search for 'minimap2' and lists several tools with their descriptions: 'Map with minimap2', 'TB-Profiler Profile', and 'Purge overlaps'. The middle panel, titled 'Tool Forms/Result Viewer', shows the configuration options for the 'minimap2' tool, including sections for 'Indexing options', 'Mapping options', and 'Filter out top FLOAT fraction of repetitive minimizers'. The right panel, titled 'History', shows a list of recent jobs, including '4158: Preprocessing and mapping reports', '4157: MultiQC on data 4154, data 4153, and others: Plots a list', '4155: data 2165, data 2164, and others (flattened) a list with 1118 items', '2777: SnpEff eff: on collection 2 689 - HTML stats a list with 86 items', '2689: Replace Text on collection 2602 a list with 86 items', '2602: VCF-VCFintersect: on collection 2515 and collection 234 1 a list with 86 items', '2428: VCF-VCFintersect: on collection 2341 and collection 874 a list with 86 items', and '2167: Lofrec filter on collection 874 a list with 86 items'.
